

Sayid Arip

sayidariipp@gmail.com | github.com/awiipp | Jakarta, Indonesia

SUMMARY

Fresh graduate in Software Engineering with an interest in fullstack web development, especially backend development using PHP and Laravel. Experienced in building web applications, REST APIs, MySQL integration, and React.js interfaces through personal projects. Familiar with Git, API integration, and currently learning backend technologies such as Go.

EDUCATION

SMK Negeri 46 Jakarta
Software Engineering

Jakarta, Indonesia
2023 – 2026

EXPERIENCES

Indi Technology | Intern

May 2026

Fullstack Developer

- Implemented n8n workflow automation, including webhook handling, node-based automation, and integration with Laravel applications.
- Implemented AI chatbot features using Laravel AI SDK, including AI response handling, conversation flow integration, and backend service integration within Laravel applications.

Indi Technology | Vocational Intern

Jul 2025 - Oct 2025

Fullstack Developer

- Developed REST APIs for a permit management system using Laravel, including business logic implementation, multi-role authorization, database notifications, and backend architecture design.
- Performed API testing and validation to ensure secure and reliable communication between backend services and client applications.
- Coordinated with the mobile development team regarding API contracts, integration, request/response structures, and implementation for mobile applications.
- Analyzed and maintained an e-ticketing web application built with Laravel Filament, including managing models, resources, and admin panel functionalities.
- Learned and implemented basic backend development concepts using Go and Fiber, including CRUD application development and REST API fundamentals.

PT. Hexagon | Vocational Intern

Sep 2024 - Nov 2024

Backend Developer

- Developed a school expense recap system using Laravel and MySQL to record, manage, and summarize financial transaction data.
- Implemented backend features including CRUD operations, form validation, authentication, relational database management, and REST API endpoints for expense data processing.
- Optimized data retrieval and recap generation using Eloquent relationships and query filtering to improve reporting efficiency and frontend integration.

PROJECTS

Zinc Blog Platform | github.com/awiipp/zinc

Oct 2025

- Blog platform with multi-role review system built using Laravel 12, Inertia.js (React), and Tailwind CSS.

- Implemented backend architecture and features including Service Layer pattern, RESTful workflows, Policy authorization, polymorphic relationships, event-driven database notifications, queues, and image upload management.
- Built and managed content publishing logic with state-based post transitions (Draft, Review, Published, Declined) and integrated frontend-backend communication using Inertia.js.

Ranpo API Testing Tools | github.com/awiipp/ranpo

Apr 2026

- Terminal-Based API Client built with Go, inspired by HTTPie and designed to provide a more interactive experience while remaining lightweight compared to Postman.
- Implemented terminal user interface architecture using Bubble Tea, Bubbles, and Lipgloss, including asynchronous HTTP execution, viewport management, textarea components, and terminal styling.
- Built core features such as environment variable resolution, YAML/JSON-based local persistence, pretty-printed JSON rendering, and request management using Cobra, Resty, and Go file handling.

ACHIEVEMENTS

- 3rd Place Web Development Competition** | Frontend Developer
- Dec 2024
- 3rd Place LKS Web Technology Jakarta Timur I** | Fullstack Developer
- Apr 2026

SKILLS

- Programming Languages** : HTML/CSS (Tailwind, Bootstrap), Javascript (React), Typescript (NodeJS, React), PHP (Laravel), Go (Fiber)
- Database** : SQL (MySQL)
- Developer Tools** : Figma, Git, GitHub, Notion
- Soft Skills** : Communication, Problem Solving, Team Collaboration, Adaptability, Project Management, Creativity, Attention to Detail,
- Languages** : Indonesian, English
